

Pontoon Liners™

Repair Bladders for Floating Roofs

Mesa custom designs Pontoon Liners for Pontoon Floating Roof tanks. The Pontoon Liner is installed inside the pontoon and inflated to displace product and keep the roof afloat.

Mesa's Pontoon Liners are most commonly used in a pontoon that has begun to leak. Leaking pontoons can fill with product from the tank causing the floating roof to sink. The floating roof can be severely damaged if it sinks into the product. A sunken roof can also damage the shell and floor of the tank. Sunken roofs lead to difficult and expensive cleanup procedures before the tank can be put back into operation.

Benefits

- Keep roof floating until repairs can be made
- Reduce risk of tank damage
- Help prevent damage to floating roof
- Avoid environmental hazards or violations
- Prevent costly cleanup and decontamination procedures

Mesa's Pontoon liners are engineered, manufactured and tested using the latest polymer technology. Liners are made from **MesaThane™** which provides excellent vapor sealing, flexibility and hydrocarbon resistance.
