

FLEXIBLE PIPE FOR ABOVE-GROUND STORAGE TANK APPLICATIONS

RESIST-ALL-CLAD

Flexible Pipe is designed for above-ground storage tank applications such as roof drains, skimmer lines, and fire foam conduits.

It is compatible for continuous service — both externally and internally — in a wide range of pH solutions and chemicals, including pure MTBE, benzene, toluene, pure alcohol, gasoline, and jet fuel.

Resist-All-Clad features floating 150-lb ANSI raised face flanges and a stainless steel armored cover for maximum external protection. Its steel fittings are protected by thick nylon coating, inside and out. The repeating lay pattern and tether assembly assure that it will remain positioned correctly. It features negative buoyancy in water as well as heavy crude and includes a non-corrugated, smooth internal fluid-way.

Mesa Rubber Co., 4141 Airport Rd., Cincinnati, OH 45226-1643.
