

ENVIRONMENTAL GAUGE POLE COVERS

“VAPOR-GUARD” Environmental Gauge Pole Covers are designed to inhibit hydrocarbon vapors from escaping from aboveground storage tank slotted gauge poles.

The covers seal in vapors that would otherwise leak from the inside of the tank through the slots in the pole and into the outside air. They are designed, tested, and manufactured using the firm's seal materials. The Gauge Pole Cover creates a casing around the exterior of the gauge pole and includes a nylon zipper for installation while the tank remains in-service. Further data is free.
